## TERMS

Prices subject to change without notice. Prices are F. O. B. Shelocta, Pa.

Orders may be booked with a 25% deposit, balance prior to shipment or shipment will be sent C. O. D. 50c packing charge on orders less than 1000. Orders over 1000 will be packed free. Our free packing is your discount except; prices are subject to a 5% discount on quantities of 25,000 or more. Send want list for special quotations on larger orders.

500 trees at 1000 rate.

Our liability ceases when trees are delivered to carrier. If breakage occurs or if stock suffers through delay in transit claims should be made on the transportation company immediately.

We accept orders on the following basis: We do our best to ship stock to arrive at destination on your specified date. However due to changing weather in early spring we can not always guarantee to have trees at a destination on a definite date.

We reserve the right to cancel orders if necessitated by weather conditions or for any other reasons beyond our control.

We believe that the best way to build a lasting and pleasant business is to produce the best plants possible and to sell them at a reasonable price.

We have very nice seedlings, stocky with healthy root systems. We grade very carefully, eliminating poor, small spindly seedlings that will have a hard time growing, and thus package a very high quality product.

The old saying that "Anyone can make an inferior product, cheaper" still holds true. Our low prices are the best possible for a quality package. We could cut quality and sell lower but we have built our business through the faith of our customers that know they will get the best and the most for their dollar from us in a quality package.

We depend a great deal on our customers recommending our products to others. We hold down advertising costs by letting our customers advertise for us and our customers get the benefit of our lower costs in the form of lower prices on our seedlings.

We know we are pleasing old customers. Why not let us prove that we can make old customers out of new ones?

YOUR SATISFACTION

## WHEN AND HOW TO PLANT TREES

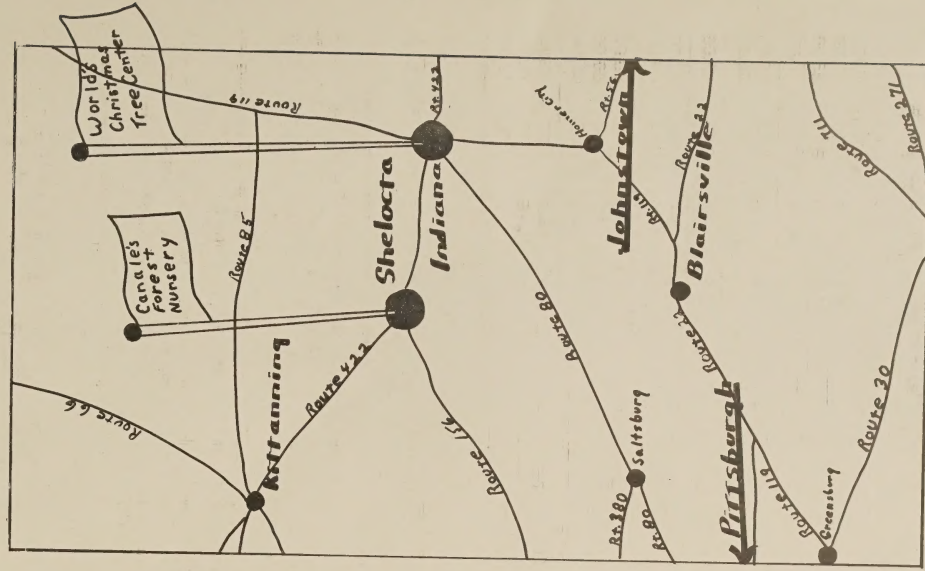

Experience has taught us that best results are usually obtained from Spring planting, March 25 to May 15. Our earliest shipping dates in the past as governed by the weather has been the last week in March. Although Fall planting is sometimes satisfactory we don't recommend it and do not take seedling orders for Fall shipment.

Take care of your Nursery Stock immediately upon its arrival. If possible plant at once when you receive shipment. Roots should not be exposed to sunlight or drying winds. If weather is too cold for painting put the box or bundle in a cool but frostproof cellar and moisten roots. If you are not ready to plant, heel stock in the ground. Heel in your trees in a place where they will have protection from the sun and wind, a place convenient to the planting site and if possible in a shaded location such as the north side of a building or woodlot. Dig a trench deep and wide enough to hold the roots without crowding. Place the roots in the bottom of the trench and spread out the trees so the dirt can be filled in about the roots to exclude air. Then heap more soil on the roots to cover roots completely and pack firmly. If ground is too dry moisten the dirt about the roots.

It is not necessary to prepare the soil in any way before planting, as the additional expense is not justified and we find that grass and weeds prove a benefit in conserving the moisture and a shade during the first few years after planting. Do not use any kind of fertilizer on the soil. Immerse roots of trees in a bucket of soupy mud to keep the roots from drying out. Dig a hole deep enough to accommodate the roots and firmly pack the soil around the roots. When trees are planted too close together, they crowd and the resulting competition speeds the height growth and tends to make a poor Christmas tree. Spacing trees 4 by 4 ft. requires approximately 2700 per acre and can be used where thinning is contemplated at an early age; 5 by 5 ft. require approximately 1700 and is most generally used as it allows for thinning and will still leave a good stand for timber; 6 by 6 ft. requires approximately 1200 per acre and is recommended where trees are planted for forest products and no early thinning is to be done.
